General Information
 Typical applications include commercial and industrial food service kitchens where excessive grease may interfere with the proper drainage of the sewer system. The grease interceptor is generally buried below grade for gravity flow sewer systems. A sample well or cleanout is utilized on the outlet side for sampling by the local water authority.

Specifications
 Concrete
 Design strength of 5000 PSI at 28 days. Unit is of monolithic construction at floor, first stage of wall and baffle with sectional riser to required depth. (Monolithic baffle required, slide-in type is not accept)

Reinforcement
 Grade 60 reinforced with steel rebar conforming to ASTM A615 on required centers or equal.

Manways
 Manhole frames, covers or grates are manufactured of grey cast iron conforming to ASTM A48-76 Class 30. Manhole shall be nominal 24 inch diameter and be traffic duty.

Engineering Data
 The grease interceptor is structurally & hydraulically engineered to conform to UPC/IPC and regional plumbing codes. Consult with local authorities for specific application requirements.

Shop drawings shall include complete structural & buoyancy calculations certified by a licensed professional engineer upon request.

Consult with ParkUSA for exact excavation dimensions & shipping information.
